[Excerpt from actual findings]

Border collie mix, Age 9

Timeframe of sessions: 30 May to 15 October

Initial session: 30 May

Update: 11 June

All organs and glands reporting happy/balanced and aligned. No further pathogens reported. Back on small portions of kibble – successfully, with no digestive upset - for first time since previous October. Body Code confirmed kibble is working well for him.

Update: 19 July

100% of diet is now kibble. Body Code confirms it is still working well for him.

Updates: Occasional sessions, 18 August to 15 October

Removed other layers of imbalances, as they appeared, to ensure his digestive system happy, kibble digesting, weight increasing.

Session Details

Over the course of his sessions, we addressed the below imbalances, among others, related to his symptoms:

Physical intolerance: Raw food. Reset faulty connection.
